

JOETRAX

WHY DO YOU NEED JOBTRAX

JobTrax takes the chaos of job applications and turns it into a structured, motivating experience. By connecting to Gmail, it automatically scans and parses application-related emails so users don't need to manually track where they've applied.

Every application is logged into a dashboard where progress is visualized like a game with achievements, streaks, and XP to reward consistency.

On top of that, JobTrax has a multiplayer element: students and job hunters can add friends, share progress, and celebrate milestones together.

This transforms a lonely and stressful process into a collaborative and motivating journey.

PROBLEMS

WHAT DO WE HAVE

Chrome Extension Prototype ➔ connects to Gmail and fetches job-related emails.

AI Parsing (Claude API) ➔ extracts structured info like company, position, and application status.

Job Application Database ➔ stores all applications with history of statuses and timestamps.

Gamification Layer ➔ achievements (first app, 5 in a day, interviews, offers), streaks, and XP. User Dashboard ➔ visualizes progress, history, and unlocks.

Social Features ➔ ability to add friends, view their progress, and compare achievements.
